

Modernize Your Payment Architecture with Catalyst Integration Manager

20+ Years of FinTech Experience

500+ Products and Services Deployed Globally

250+ Team Members

Financial institutions are modernizing their payment infrastructure to support multi-rail ecosystems. Banks must bridge legacy payment rails with emerging infrastructures such as blockchain networks, digital assets, and new payment channels while maintaining resilience, security, and operational reliability.

◆ Catalyst Integration Manager

Catalyst Integration Manager provides a resilient and flexible integration layer that bridges legacy Swift connectivity with modern payment infrastructures. It enables financial institutions to modernize their payment architecture while maintaining high levels of efficiency, security, and availability, with out-of-the-box ISO 20022 message transformation capabilities.

Connectivity for Swift Interfaces

Alliance Cloud

Alliance Lite2

Alliance Access

Alliance Messaging Hub

Integration for Swift Essentials

Swift GPI API

Transaction Screening API

SwiftRef API

Payment Pre-Validation API

Swift Messaging API

Payments & Swift Services

AI-assisted ISO 20022 Address Structuring

Swift IPLA / SIL Replacement

Migration to Swift Alliance Cloud

Emerging Payment Infrastructure

DLT & Blockchain Networks (e.g., Canton Network)

Digital Asset & Stablecoin Infrastructures

PSP & Wallet API Connectivity

Multi-Rail Payment Architecture Support

Supporting custom integration and traffic orchestration requirements, Catalyst enables financial institutions to:

 Integrate with Swift Alliance Cloud in days

 Integrate with Swift Essentials via APIs instantly

 Prepare infrastructure for multi-rail payment environments
